Distributed Naming & DNS

Net Layer → e.g. IP addresses

- 1) Convenience
- 2) Modularity

DNS → Host names → Records

Goals

"Tel. book model"1) Scalability — Central serverDistrib. database

2) Reliability

Lookups

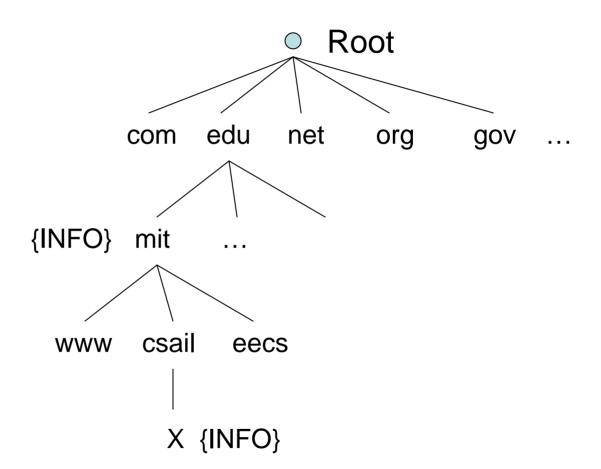

Name → Record: dns_resolve(dnsname)

- App-specified
- DNS config

Search

Namespace

- Hierarchical
- Structured

Delegation

- Root
- Top-Level Domain (TLD)
- Domains anywhere in tree

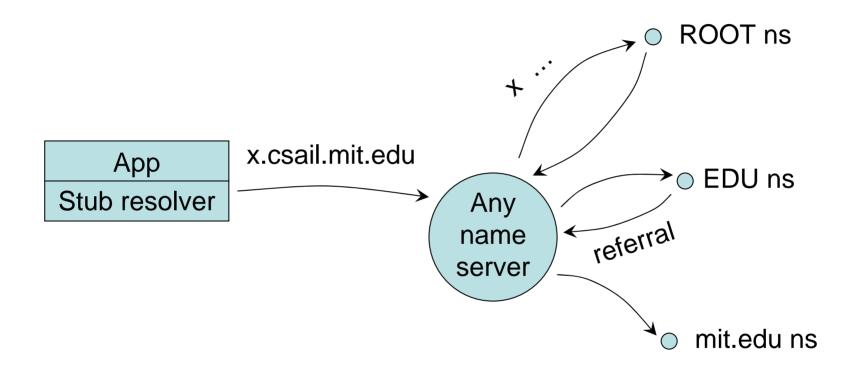

Records

A: Address

MX:

CNAME: "Synonym"

NS: Name server record

- 1) Bootstrap
 - Root identity
 - Stub?
 - DHCP
 - Manual
- 2) Performance

Caching

- Recursive resolution
- Expiration times
